Written presentation

As mentioned before, it is necessary for you to prepare a written presentation and an oral presentation of the work that you have prepared in the previous lessons for your class work and present it in the appropriate format. The subject of the presentation must be in the computer field. If you don't have such a report, you can find an article or a scientific topic and write a few pages about it. You must have followed all the points mentioned for preparing written and oral presentations. The purpose of these presentations is to ensure the correct use of written and oral presentation methods in your work. Scientific content is not the goal of presentation, but the content should be correct from a scientific point of view and not have any serious problems.

The text should be prepared in MS-Word file format and its references with the help of EndNote.

All the rules of preparing a scientific written report that were taught in the class must be used in the preparation of this text and the writing must be prepared and reported in a complete format of a written report. Save the Word file collection and the Andnote library in a compressed file and upload it.

Use Persian vocabulary (try as much as possible).

It is important to respect the intellectual property of figures and tables (re-draw and reference the figures again).

This report will have a higher score than previous reports, so be careful in preparing it.

The written report should be about four to six pages.
